

# ONC 201 Studie

Assoc. Prof. Priv.-Doz. Dr. Anna Sophie Berghoff

Klinische Abteilung für Onkologie

# Study design

# Study design

# Study Inclusion Criteria

Patients have to meet all of the following criteria to be included into the study.

# Inclusion criteria

- Body weight  $\geq 10$  kg at time of randomization.
- Histologically diagnosed H3 K27M-mutant diffuse glioma
- At least one, high-quality, contrast-enhanced MRI of the brain
  - obtained before radiotherapy and post resection (if applicable)
- At least one, high-quality, contrast-enhanced MRI of the brain obtained 2 to 6 weeks after completion of frontline radiotherapy.
- Completed standard frontline radiotherapy within 2 to 6 weeks prior to randomization.
- KPS  $\geq 70$
- Stable or decreasing dose of corticosteroids and anti-seizure medications for 7 days prior to randomization

# Exclusion Criteria

Patients meeting any of the following criteria will be excluded from the study.

# Exclusion Criteria

- Primary spinal tumor
- Diffuse intrinsic pontine glioma
- Evidence of leptomeningeal spread of disease or cerebrospinal fluid dissemination
- New lesion(s) outside of the radiation field
- Received whole-brain radiotherapy
- Received proton therapy for glioma
- See Protocol for a more detailed list of exclusion criteria.
